

Test 17

- A 10-year-old boy presented to the clinic with complaints of nasal congestion. It is known that similar symptoms occur periodically (spring, autumn). Medical history: atopic dermatitis. The child's father has bronchial asthma. Objective findings: pale, slightly puffy face. Respiratory rate: 22/min. Auscultation: vesicular breath sounds over the lungs. Rhinoscopy: nasal mucosa is swollen and pale. What condition can be suspected?
- Topic 5. Nose diseases. Nasal septum deviation, nasal furuncle, acute and chronic rhinitis.
