

The background features several decorative elements: a light blue circle with an orange flower-like pattern in the top left; a pink circle with a radial line pattern in the top right; a pink circle with a wavy line pattern in the bottom left; and a pink circle with a dashed line pattern in the bottom right. There are also several small solid circles in pink, orange, and blue scattered throughout.

A 58-year-old patient appeared multiple spots in front of the right eye within 2-3 hours. During the examination, it was observed that visual acuity was 0.02 eccentric, the pupil of the right eye was moderately dilated, and light reaction was reduced. The results of ophthalmoscopy: multiple retinal hemorrhages with different sizes and shapes (the "crushed tomato" symptom), optic disc swollen and hyperemic. From the anamnesis it is known about the presence of hypertension of the II degree. What is the diagnosis?

(TOPIC 11: Diseases of the retina. Emergency conditions in ophthalmology (acute central retinal vein and its branches occlusion, central retinal artery embolism, retinal detachment, orbital phlegmon).)
